Highest risk first. Open a customer to see why they were flagged.

Customer	Risk	Main reasons	Tenure
C-10482	High 91%	Month-to-month contract, 4 support tickets in 30 days	3 mo
C-20917	High 88%	Usage down 60% over two months, short tenure	5 mo
C-31554	High 86%	Month-to-month contract, high charge for low usage	11 mo
C-18830	High 83%	Tickets take 6 days to resolve on average, usage falling	8 mo
C-44219	High 81%	Short tenure, no autopay	2 mo
C-27706	High 79%	3 support tickets in 30 days, month-to-month contract	14 mo

Why customers leave

What most separates customers who left from those who stayed.

Longer bar, stronger link to leaving. These are patterns in past data, not proof of cause.

See what to do about each

Contacting the top 35% by risk reaches about 7 in 10 customers who leave. Last trained 12 Oct 2026.

How well does it work?

At-risk customers

412 high risk and 1,126 medium risk. Highest risk first.

High 91% chance of leaving

Mark offer sent | Mark as called

Suggested next step

Call within two days. Fix the two open tickets first, then offer a longer contract.

Why this customer was flagged

The biggest factors behind the score, in plain terms.

Month-to-month contract — Raises risk
No commitment period, so leaving costs nothing.

4 support tickets in the last 30 days — Raises risk
Well above what most customers raise. Repeated issues often come before a cancellation.

Only 3 months as a customer — Raises risk
Newer customers leave more often than long-standing ones.

Usage steady since joining — Lowers risk
No drop in sessions yet, so there is still something to build on.

Notes from your call

What did the customer say? What did you offer?

Opened 9 Oct	Open for 3 days

Drivers and actions

318 of the 412 high-risk customers are on month-to-month contracts, so that is the first place to act.

Listed in order of how strongly each factor goes with leaving. These are patterns in past data, not proven causes.

	What we see	Suggested action	Owner	Status
1	**Month-to-month contract** 43% of these customers left, against 11% on one-year contracts. In 318 of 412 high-risk customers	Offer a discount for moving to a one-year contract during the first 90 days.	Sales	In progress
2	**Short tenure** 48% of customers in their first 6 months left, against 14% after two years. In 241 of 412 high-risk customers	Add a check-in call at day 30 and send a setup guide in the first week.	Customer succes	Not started
3	**3 or more support tickets in 30 days** These customers left at more than twice the usual rate. In 187 of 412 high-risk customers	Pass any customer raising a third ticket in 30 days to a senior agent.	Support	Not started
4	**Usage falling month on month** Customers whose sessions fell by a third or more left far more often. In 156 of 412 high-risk customers	Send a tips email when usage drops by a third, and call if it keeps falling.	Product	Not started
5	**High charge for the amount used** Customers paying a lot for little use left more often than similar customers. In 94 of 412 high-risk customers	Review plan fit and offer a cheaper plan before the customer asks.	Sales	Not started

Test before rolling out
Try each action on a small group first and compare how many of them leave against a similar group you left alone. That shows whether the action really works.

Model and data

How the scores are made, and how far you can trust them.

How many customers can your team contact?

Move the slider. Contacting more customers reaches more of those who would leave, but more of your calls go to people who would have stayed.

How well does it work?

Checked on customers the model never saw while learning. Results shown at the 35% setting.

What we measure	Goal	Result	Status
How well customers are ranked from safest to riskiest (ROC-AUC)	0.80 or more	**0.84**	Met
Customers who leave that the list catches (recall)	70% or more	**71%**	Met
Contacted customers who really would leave (precision)	50% or more	**54%**	Met
Riskiest 10% compared with an average group (lift)	2.5 times or more	**3.0 times**	Met
